.parallel to the sides of the membrane, and whose numbers are represented by  $n$  and  $n + 3$ . The nodal lines which correspond to the same sound form a system of figures, such that we can pass from one to the other by continuous changes in varying the mode of disturbance, without changing the sound; but we can never pass in a continuous manner from the lines of one sound to those of another. Circular membranes can only give nodal lines along the diameters or circumferences, either separate or combined, depending on the method of vibration and on the point or points of enforced rest. 239. Because of the limited time allotted to this part of the course, many subjects of importance are necessarily omitted in the text. Among these are, 1. The theory of beats, and resultant sounds. 2. The phenomena of interference, whose consequences, however,...
